

**DEPARTMENT OF STATISTICAL SCIENCES
STATISTICS HONOURS PROGRAMMES 2020
GENERAL INFORMATION FOR STUDENTS**

Honours Programme Convenors

	Dr Greg Distiller	Dr Etienne Pienaar
Office:	PD Hahn 6.67	PD Hahn 5.43
Phone:	xt 4789	xt 4784
Email:	Greg.Distiller@uct.ac.za	Etienne.Pienaar@uct.ac.za

Summary of Programmes

The following are the full honours programmes offered in the department:

- STA4006W** – BCom(Hons) in Statistics
- STA4007W** – BSc(Hons) in Statistical Sciences
- STA4010W** – Honours year requirement for BBusSc specialising in Analytics
(4 course credits for the BBusSc curriculum)

In addition to the above full honours programmes, opportunity is also provided (primarily to fourth year BBusSc students in streams other than Analytics) to take a selection of coursework modules from the honours programme, equivalent to either a full- or half-year course:

- STA4011W** – This requires completion of 10 credits from the honours programmes listed below, and gives credit equivalent to a full fourth-year level course (2 course credits for BBusSc)
- STA4016H** – This requires completion of 6 credits from the honours programmes listed below, and gives credit equivalent to a half fourth-year level course (1 course credit for BBusSc)

Basic Programme Structures

Requirements for each programme are expressed in terms of a numbers of credits (which may or may not bear any relationship to the definitions of “credits” used anywhere else in the university!). Broadly speaking, one credit is the equivalent of half of an honours semester module (typically about 12 formal lectures plus associated practical or assignment work).

Each programme has a set of core modules plus a number of electives to make up a total required number of credits. Students may take more than the required number of electives, and the best of the marks for the required minimum number of electives will be

taken into consideration in calculating the final grade. Electives may, with the permission of the programme convenor, be taken from honours modules in other departments.

Core requirements and the total numbers of credits depend on the programme chosen, and in some cases, also on the undergraduate stream followed (i.e. mathematical statistics or applied statistics). The requirements are summarised in the following table.

Core Courses	Semester	Credits	STA4006/7W		STA4010W	
			Math Stats	App Stats	Math Stats	App Stats
Project	1+2	6	✓	✓	✓	✓
Statistical Computing	0	2	✓	✓	✓	✓
Matrix Methods	0	1		✓		✓
Multivariate Statistics	1	2	✓	✓	✓	✓
Likelihood Theory	1b	1	✓		✓	
Intro to Stochastic Processes	1a	1		✓		✓
Intro to Bayes	1b	1		✓		✓
Operations Research A	1	2	✓		✓	
Operations Research B	2	2	✓	✓	✓	✓
Analytics	2	3	✓	✓	✓	✓
Total Core Credits			18	18	18	18
Total Required Credits			24	24	22	22

The total required credits must be made up by selecting additional modules, either from the core list (where these are not already “core” for the relevant programme), or from the list of elective modules offered by the department (typically counting 2 credits each), or from graduate courses in other departments (with the permission of the programme convenor, and subject to the constraint that only one course may be taken from another department).

The electives on offer in the department in 2019 (provided that at least 4 students elect to do the module) are as follows:

Module	Semester	Credits	Lecturers
Decision Modelling	1	2	L Scott / G Rakotonirainy
Biostatistics	1	2	F Little / G Distiller
Time Series Analysis	2	2	B Ernie / S Salau
Portfolio Theory	1	2	T Gebbie
Bayesian Analysis	2	2	A Clark
Applied Spatial Data Analysis	2	2	S Er / S Salau
Advanced Probability ¹	2	2	M Mavuso

¹Only for Maths Stats students

Timetable

The honours modules are taught in 12-week semesters that correspond with the semesters of the academic year. There will be two exam sessions (mid year and at the end of the year). You may choose as many modules as you like within each semester, provided that you have enough credits for your programme.

Additional Information and Requirements

1. Attendance at lectures is compulsory and attendance will be monitored. Inform your lecturer in advance if there are compelling reasons why you are unable to attend. Persistent absenteeism without good reason will result in a DPR.
2. We allow students to try an elective for the first two and a half weeks to see what it's about. Subsequently, there will be a fixed date at which students' module choices need to be finalised (see the Honours Academic Activities Calendar). Selection of modules become binding at that date. This applies to all programmes.
3. You are not allowed to video record a lecturer without their express permission.
4. Most compulsory and elective modules require students to hand in practical assignments. You can expect one assignment for every 12 lectures (i.e. 2 assignments for a 2 credit module). Timely submission of practical assignments and class exercises by the due dates is a DP requirement. Late submissions will be penalised at the module convenor's discretion. Failure to submit one or more assignments may result in a DPR for the module.
5. Regular research seminars are held in the department, usually during lunchtime on Mondays. Attendance at seminars is a DP requirement for honours students.
6. Printing: You will have access to a departmental printer and may print a maximum of 400 pages during the year without incurring any costs. Your use of the printer will be monitored and you will be required to pay for additional printing once you exceed the 400 page limit.
7. Computer access: Once you are registered, you will have 24-hour access to the honours computer lab via your student card. You may log in to any computer in the honours lab with your student number and network password. The lab is reserved primarily for use by the statistics honours class. Other graduate students or official visitors to the department may also have access to the lab, but *you are not permitted to allow your friends to use these facilities*. Please report strangers to the course convenor immediately. If you are the last person to leave the lab, *make sure that the doors are locked*. Any problems experienced with the computers or printer should be reported to Kevin Jeptha (Kevin.Jeptha@uct.ac.za). Make sure you keep the laboratory clean. Do not leave paper lying around. Do not eat or drink while working at a computer. Do not make a noise. Students violating the above rules will have their access privileges withdrawn.

Projects

The honours project forms an important and substantial part of the programme. In most cases, the project will involve the application of new methods of statistics and/or operations research to non-trivial real world problems. On some occasions, students may be permitted to undertake a project that involves more fundamental research into methods of statistics or operations research.

Projects will be done in groups of two and topics will be allocated to groups by the end of the 1st term. Please note that you are expected to work continuously on your research project throughout the year (which is why project time has been inserted into your weekly timetables). Importantly, this includes the June/July undergraduate vacation period! You should therefore avoid making alternative plans (e.g. long holidays away, full-time internships, etc.) over this time. The projects are due by the start of the exam session at the end of the year (12 October).

Further information about the projects and the expected outputs will be provided at a later stage. You may also refer to the Honours Project Information guide for details.

Plagiarism

Plagiarism is to use another person's work and to present it as one's own. This can occur very easily when working in groups, especially in the computer lab while busy with programming assignments. While group work is encouraged, you must make sure that the work that you hand in is your own. So go home and do the final programming and write-up yourself! The easy availability of information on the internet has made plagiarism much more rife than before. Plagiarism can even occur through the thoughtless downloading of "interesting" material and incorporating this into reports without malicious intent. However, ignorance is no excuse! Plagiarism is intellectual theft and fraud, whether intended or not, and instances of plagiarism which are discovered are dealt with very severely (including expulsion from the University).

For the above reasons, each and every written submission to the Department (projects, reports, assignments, essays) must include the following declaration, which should be signed:

1. I know that plagiarism is wrong. Plagiarism is to use another's work and pretend that it is one's own.
2. Each significant contribution to, and quotation in, this project report from the work of other people has been attributed, and has been cited and referenced.
3. This project is my own work.
4. I have not allowed, and will not allow, anyone to copy my work with the intention of passing it off as his or her own work.

Signature _____

In order to avoid unintended plagiarism, it is advisable to get into the habit of systematically recording sources of all information retrieved, and of referencing such information whenever used. The UCT writing centre does provide some guidelines to students on referencing conventions. They tend to favour the so-called Harvard style (referencing by author and year), but many technical journals (mathematical and statistical) prefer numbering of references. On pages 5 and 7, both styles are illustrated, showing both how references appear in the text and how the bibliography is listed. Both examples were generated by the BiBTeX utility in L^AT_EX.

Harvard Reference Style Illustrations

The examples here were generated by the L^AT_EX *natbib* package, using the author-year (allied to the “Harvard-style”) referencing option, with the *apalike* bibliographic style.

A standard in-line reference to an article might be as discussed by Stewart et al. (2004), or perhaps as in Lee and Olson (1999) when citing a chapter in a book. Passing or parenthetical references to a string of related papers are also possible (Belton, 1986; Lootsma, 1993; Tversky and Kahneman, 1981; Stewart, 2005).

Similar styles apply to books, where we could refer to the work of Belton and Stewart (2002), but other books might be noted (Eden and Ackermann, 1998; Ignizio, 1976)

References
